

Automated External Defibrillator (AED)

Who should attend?

This 3-hour AED (Automated External Defibrillator) course is perfect for healthcare professionals, first responders, workplace safety officers, fitness instructors, community volunteers, teachers, school staff, family members of at-risk individuals, and anyone from the general public interested in learning how to use an AED. No prior medical experience is required, making it accessible to all who want to gain the confidence and skills needed to respond effectively in a cardiac emergency.

What you will learn?

This course equips you with essential lifesaving first aid skills for cardiac emergencies and how to use an AED machine. Key topics include:

- Chest pains
- How to setup & maintain an AED machine
- Resuscitation
- Types of AED machines
- Using the AED machine
- Unresponsive casualties

Assessment & Certification

Participants will be continuously assessed by the trainer. Successful candidates will receive a St John Ambulance certificate, valid for three years.
